6 pages have duplicate meta descriptions **About this issue:** Our crawler reports pages that have duplicate meta descriptions only if they are exact matches. A <meta description> tag is a short summary of a webpage's content that helps search engines understand what the page is about and can be shown to users in search results. Duplicate meta descriptions on different pages mean a lost opportunity to use more relevant keywords. Also, duplicate meta descriptions make it difficult for search engines and users to differentiate between different webpages. It is better to have no meta description at all than to have a duplicate one. **How to fix:** Provide a unique, relevant meta description for each of your webpages. For information on how to create effective meta descriptions, please see this Google article. You can also view the On-Page SEO Basics: Meta Descriptions article	6 0
2 issues with duplicate title tags **About this issue:** Our crawler reports pages that have duplicate title tags only if they are exact matches. Duplicate <title> tags make it difficult for search engines to determine which of a website's pages is relevant for a specific search query, and which one should be prioritized in search results. Pages with duplicate titles have a lower chance of ranking well and are at risk of being banned. Moreover, identical <title> tags confuse users as to which webpage they should follow. **How to fix:** Provide a unique and concise title for each of your pages that contains your most important keywords. For information on how to create effective titles, please see this Google article. You can also view the On-Page SEO Basics: Meta Descriptions article	2 0

2 pages have duplicate content issues **About this issue:** Webpages are considered duplicates if their content is 85% identical. Having duplicate content may significantly affect your SEO performance. First of all, Google will typically show only one duplicate page, filtering other instances out of its index and search results, and this page may not be the one you want to rank. In some cases, search engines may consider duplicate pages as an attempt to manipulate search engine rankings and, as a result, your website may be downgraded or even banned from search results. Moreover, duplicate pages may dilute your link profile. **How to fix:** Here are a few ways to fix duplicate content issues: - Add a rel="canonical" link to one of your duplicate pages to inform search engines which page to show in search results - Use a 301 redirect from a duplicate page to the original one - Use a rel="next" and a rel="prev" link attribute to fix pagination duplicates - Instruct GoogleBot to handle URL parameters differently using Google Search Console - Provide some unique content on the webpage For more information, please read these articles: \"Duplicate content\" and \"Consolidate duplicate URLs\"	2 0
2 structured data items are invalid **About this issue:** This issue is triggered if structured data items contain fields that do not meet Google's guidelines. Implementing and maintaining your structured data correctly is important if you want to get an edge over your competitors in search results. If your website markup has errors, crawlers will not be able to properly understand it, and you may run the risk of losing the chance of gaining rich snippets and getting more favorable rankings. For more information on the structured data requirements, see schema.org, Google documentation, or our article. **How to fix:** Check structured data on your webpages with a validation tool. Please note that different markup testing tools may show different results. We recommend that you use the Rich Results Test tool to review and validate your pages' structured data against their rich snippet requirements.	2 0

Warnings

Warnings

Project name: Nyccleantinc.com

Warnings	Amount
29 pages have low text-HTML ratio **About this issue:** Your text to HTML ratio indicates the amount of actual text you have on your webpage compared to the amount of code. This issue is triggered when your text to HTML is 10% or less. Search engines have begun focusing on pages that contain more content. That's why a higher text to HTML ratio means your page has a better chance of getting a good position in search results. Less code increases your page's load speed and also helps your rankings. It also helps search engine robots crawl your website faster. **How to fix:** Split your webpage's text content and code into separate files and compare their size. If the size of your code file exceeds the size of the text file, review your page's HTML code and consider optimizing its structure and removing embedded scripts and styles.	29 0
16 pages have too much text within the title tags **About this issue:** Most search engines truncate titles containing more than 70 characters. Incomplete and shortened titles look unappealing to users and won't entice them to click on your page. For more information, please see this Google article **How to fix:** Try to rewrite your page titles to be 70 characters or less.	16 0
3 pages have a low word count **About this issue:** This issue is triggered if the number of words on your webpage is less than 200. The amount of text placed on your webpage is a quality signal to search engines. Search engines prefer to provide as much information to users as possible, so pages with longer content tend to be placed higher in search results, as opposed to those with lower word counts. For more information, please view this video **How to fix:** Improve your on-page content and be sure to include more than 200 meaningful words.	3 0

Warnings	Amount
2 external links are broken **About this issue:** Broken external links lead users from one website to another and bring them to non-existent webpages. Multiple broken links negatively affect user experience and may worsen your search engine rankings because crawlers may think that your website is poorly maintained or coded. Please note that our crawler may detect a working link as broken. Generally, this happens if the server hosting the website you're referring to blocks our crawler from accessing this website. **How to fix:** Please follow all links reported as broken. If a target webpage returns an error, remove the link leading to the error page or replace it with another resource. If the links reported as broken do work when accessed with a browser, you should contact the website's owner and inform them about the issue.	2 0
0 external images are broken	0 0
0 links on HTTPS pages lead to HTTP page	0 0
0 pages don't have enough text within the title tags	0 0
0 pages don't have an h1 heading	0 0
0 pages have duplicate H1 and title tags	0 0
0 pages don't have meta descriptions	0 0
0 pages have too many on-page links	0 0
0 URLs with a temporary redirect	0 0

58 orphaned pages in sitemaps **About this issue:** An orphaned page is a webpage that is not linked to internally. Including orphaned pages in your sitemap.xml files is considered to be a bad practice, as these pages will be crawled by search engines. Crawling outdated orphaned pages will waste your crawl budget. If an orphaned page in your sitemap.xml file has valuable content, we recommend that you link to it internally. **How to fix:** Review all orphaned pages in your sitemap.xml files and do either of the following: - If a page is no longer needed, remove it - If a page has valuable content and brings traffic to your website, link to it from another page on your website - If a page serves a specific need and requires no internal linking, leave it as is	58 0
21 pages have only one incoming internal link **About this issue:** Having few incoming internal links means little to no visits or chances of being placed in search results. **How to fix:** Add more incoming internal links to pages with important content.	21 0
3 pages require content optimization **About this issue:** Content optimization enhances on-page clarity, improves user engagement, snippet eligibility, and topical authority. It's especially important for pages with a lot of content. **How to fix:** - Follow the advice provided in the error details for each page. - Improve your content with AI using the Content Optimizer tool.	3 0

Notices	Amount
2 subdomains don't support HSTS **About this issue:** HTTP Strict Transport Security (HSTS) informs web browsers that they can communicate with servers only through HTTPS connections. So, to ensure that you don't serve unsecured content to your audience, we recommend that you implement HSTS support. **How to fix:** Use a server that supports HSTS.	2 0
Llms.txt not found **About this issue:** The llms.txt file helps AI search engines better understand your website's content by providing LLM-friendly information. This file offers a short summary, guidance, and links to other useful resources. **How to fix:** • Create an llms.txt file. • Place it in your website's root directory and ensure the file is accessible. • Refer to llmstxt.org for examples and tips on how to properly create and manage it.	1 0
0 pages have more than one H1 tag	0 0
0 pages are blocked from crawling	0 0
